

Vehicle-Specific Application Information

Please note: This is NOT a fit chart. This resource document contains information on vehicles that have been seen at the Roadmaster factory. The chart is intended to be a helpful reference for installers and will continue to expand as more vehicles become accessible.

Absence from this resource document simply means the vehicle has not been through our factory.

Every reasonable effort was made to verify the accuracy of this information; however, Roadmaster, Inc. does not warrant its accuracy and will not be liable for any claims or damages which may result from errors or omissions. Use this information at your own risk.

Information is continually changing and revised as new vehicles and information becomes available. Accordingly, this information is subject to change without any notice.

Questions? Comments? Call Roadmaster Customer Service at 1-800-669-9690.

Vehicle-Specific Application Information Current as of March 22, 2024

Note A: to determine if the towed vehicle and the motorhome have 'separate' or 'combined' brake and turns signals — in a 'separate' system, there are amber or red turn signals which are separate from the brake lights; in a 'combined' system, the brake lights do the flashing for the turn signals.

Note B: to determine if a motorhome w/ separate brake and turn signals has a 3-to-2 converter, use a test light to find the turn signal and brake light circuits on the motorhome electrical socket. If the same circuit energizes both the turn signals and the brake lights, a 3-to-2 converter has been installed.

Brake and turn signals — unless the towed vehicle has separate brake and turn signals (see Note 'A' above), the motorhome brake and turn signals must be inspected by the installer to determine which electrical accessories to install. Based on the brake and turn signals in both vehicles, there are three possibilities: 1) If the towed vehicle has combined and the motorhome has combined (see Note 'A' above), then a Brake-Lite Relay (#88400) is recommended. 2) If the towed vehicle has combined and the motorhome has separate w/ a 3-to-2 converter (see Notes 'A' and 'B' above), then a Brake-Lite Relay (#88400) is recommended. 3) If the towed vehicle has combined and the motorhome has separate w/out a 3-to-2 converter (see Notes 'A' and 'B' above), then a Brake-Lite Relay (#88400) and a Brite-Lite Relay (#732) are recommended.

Purpose of the stop light switch — the motorhome monitors on all ROADMASTER supplemental braking systems always indicate when the brake pedal is depressed. This is a safeguard against accidental damage to the towed vehicle's brakes — if the customer positions the supplemental braking system incorrectly, w/ the brake pedal depressed, the monitor will alert him before the towed vehicle's brakes are damaged. In some towed vehicles, a stop light switch must be attached to the brake light switch to accomplish this.

Wiring requirements note table

1 This vehicle has the equivalent of full-time, "active" brakes. Use only InvisiBrake or BrakeMaster. If using Invisibrake, start the brake pressure at 20 psi and adjust up if additional braking force is desired. If using BrakeMaster, you will also need Brake Pressure Reducer #900002. Only use braking systems whose braking force can be significantly reduced to prevent vehicle brake damage.

2 See vehicle specific instructions on the FitMaster.

3 Box braking systems won't fit

4 Fuse(s) must be pulled

5 Battery must be disconnected. Use Battery Disconnect #766 on gas models or #767 on diesels. IMPORTANT: Some vehicles may have more than one battery. One battery disconnect is required for each starting battery.

6 If using a supplemental braking system, the battery will drain.

7 Vehicle equipped w/ automatic shut-off mode

8 Chevrolet has changed their Dinghy Towing procedure for Spark models with manual transmissions. Please see this TSB for more info: [TSB](#)

9 Vehicle's brake pedal will not accommodate supplemental braking systems with a pedal clamp. Only an Invisibrake can be used.

10 Vehicle may have variable voltage taillights. If so, use Smart Diodes.

11 You cannot use diodes or a bulb and socket kit. Contact Roadmaster for further information on wiring this vehicle.

12 The preferred method for this vehicle is utilizing Fusemaster(s); however, a Remote Battery Disconnect is a viable alternative for this vehicle.

13 If your owner's manual says to only pull the 19 ACC radio fuse, use part #76511. If it states to pull the 19 ACC radio fuse and the 20 ACC key lock fuse, use part #76512.

14 No Battery Disconnect pn 766 on dual battery or diesel models.

15 Some 2014 and newer models of this vehicle may use Matorq@ fasteners. If you are installing a BrakeMaster seat adaptor, and the vehicle has these types of fasteners, you will need a PFMTS2E bit to remove them. It can be ordered through your Snap-On dealer.

17 Some models of this vehicle may have LED taillights. If this is the case, bulb and socket kit #155 cannot be used.

Towing and Suspension Solutions

Questions? Comments? Call Roadmaster Customer Service at 1-800-669-9690.

18 L, LT and LS trim models are equipped with incandescent, variable voltage bulbs. Smart Diodes or bulb and socket kits are the only solutions for these models.

19 Owner's manuals for 2014 Honda CRVs may incorrectly identify the fuse in the schematic. See TSIB 151 for more information.

20 As per GM Technical Service Bulletin 17-NA-348, GM has identified 4-cylinder models of this vehicle as having steering instability issues while towing. If you have a 4-cylinder model of this vehicle, you will need a #76517 instead of a 76511, and will

21 Additional wiring information may be available for this vehicle. Visit fitmaster.roadmasterinc.com for more information.

22 Models with ParkSense features will need Smart Diode Kit #152789 instead of the #154.

23 Inspect the taillights. If you have incandescent bulbs, use Smart Diode Kit #153782. If you have LEDs, use Smart Diode Kit #153789.

24 See FitMaster for additional wiring information on this vehicle.

25 Determine if the vehicle has the electronic brake booster option. If so, follow the instructions in Ford TSB 22-2210. Otherwise, substantial non-warranty brake damage may result. Note: This specific TSB refers to Broncos but this issue applies to any

26 Once the vehicle is in 'Tow Mode,' you must wait approximately ten minutes for the vehicle to enter 'Sleep Mode.' If you do not wait for it to enter 'Sleep Mode,' the vehicle will overbrake, causing severe, non-warranty damage to the vehicle's brakes and/or tires.

27 GM Document ID: 6003321 states that you must disconnect the battery if towing this vehicle.
