CAUTION
Read all instructions before assembling or operating this device. Failure to understand how to properly assemble or operate the spare tire carrier could result in extensive property damage or severe personal injury.

WARNING
Do not use a hitch extension, a high-low hitch or any similar product in conjunction with the spare tire carrier, or failure of any of these components may occur resulting in property damage, personal injury or even death.

Assembly instructions

Tools required
• torque wrench
• Socket wrenches in the following sizes: ¾"; 13/16"; 7/8"; 15/16"; and 1-1/8"

1. Slide the base assembly (Figure 1) into the motorhome hitch receiver until one of the two pre-drilled hitch receiver bolt holes (Figure 1) aligns to the corresponding hole in the hitch receiver.

WARNING
Do not use the spare tire carrier if any part of the second hitch receiver bolt hole is over the lip of the hitch receiver, as shown in Figure 2. Over time, this will cause the shank of the spare tire carrier base to break at that point.

If the spare tire carrier cannot be attached in any other way, call ROADMASTER – a base with a single receiver bolt hole is available.

2. Although not required, we recommend using Loctite® Red on the 3½" hitch receiver mounting bolt.

Now use the 15/16" socket wrench to attach the 3½" hitch receiver continued on next page
mounting bolt (Figure 1), with the lock washer under the bolt head. Torque to 100 ft./lbs. Secure it with the provided hairpin clip or with an optional padlock, ROADMASTER part number 301.

3. Position the wheel mount (Figure 1) on top of the base assembly as shown in Figure 1.

   Attach the 4" pivot bolt — use the ¾" flat washer and both of the ¾" inner diameter plastic washers (one on either side of the wheel mount shaft) and secure the bolt with the lock nut, using the 1-1/8" socket wrench.

   Torque the pivot bolt to 50 ft./lbs.

   **CAUTION**

   Hold the wheel mount in place until it is secured. The wheel mount is heavy and can cause property damage or severe personal injury if it is allowed to fall.

   Note: there are two sizes of plastic washers in this kit. Although they look the same, one set has an inner diameter of ¾" and the other has an inner diameter of 9/16".

4. Attach the safety bolt and hand-tighten the bolt.

   **CAUTION**

   DO NOT DRIVE THE MOTORHOME WITHOUT THE SAFETY BOLT IN PLACE. The safety bolt will hold the wheel mount shaft upright if the locking mechanism should fail. Property damage, personal injury or other consequential, non-warranty damage can occur if the locking mechanism fails and the safety bolt is not attached.

Spare tire installation

5. Remove the safety bolt (if it is attached).

   Insert the lever bar and pin the bottom hole of the bar to the wheel mount shaft with the safety pin and clasp, as shown in Figure 1.

   Lift the release handle (Figure 3) until it clears the retaining slot (Figure 3). Holding the lever bar, swing the spare tire carrier to the ground.

   **CAUTION**

   Be careful when lowering the spare tire carrier. Property damage or severe personal injury can result if it is allowed to fall.

6. Roll the spare tire up to the spare tire carrier.

   Align the two lug holes in the wheel which are most opposite each other to the corresponding slots in the wheel mount.

**Safety Definitions**

These instructions contain information that is very important to know and understand. This information is provided for safety and to prevent equipment problems. To help recognize this information, observe the following symbols:

**WARNING**

WARNING indicates a potentially hazardous situation which, if not avoided, could result in property damage, serious personal injury or even death.

**CAUTION**

CAUTION indicates a potentially hazardous situation which, if not avoided, may result in property damage, or minor or moderate personal injury.

**NOTE**

Refers to important information and is placed in italic type. It is recommended that you take special notice of these items.
7. As shown in Figure 1, fasten the 9/16” inner diameter plastic washers, flat washers, lock washers and hex nuts to the 2½” tire mounting bolts.

Position the 9/16” inner diameter plastic washers directly against the spare tire carrier. Position the flat washers, lock washers and hex nuts on the other side of the wheel.

Use the 13/16” and 7/8” socket wrenches to attach the hex nuts and 2½” tire mounting bolts.

Note: the lug holes in the wheel may be much larger than the bolts. However, the wheel will still be held securely in place as long as the washers cover the lug bolt holes.

CAUTION
Position the plastic washers directly against the spare tire carrier. This will help protect the wheel from any marring. Failure to follow these instructions may cause scratches and other non-warranty damage to the wheel.

8. Make certain that the bottom hole of the lever bar is secured to the wheel mount shaft with the safety pin and clasp. Then use the lever bar to raise the spare tire carrier up to the vertical position.

If necessary, pull up on the release handle until it drops into the retaining slot.

CAUTION
Do not let go of the spare tire carrier until the release handle drops into position. The carrier and spare tire are heavy and can cause property damage or severe personal injury if they are allowed to fall.

9. Unpin the lever bar and let it slide inside the wheel mount shaft; reattach the safety pin and clasp to the top hole (Figure 1).

10. Attach the safety bolt.

CAUTION
DO NOT DRIVE THE MOTORHOME WITHOUT THE SAFETY BOLT IN PLACE. The safety bolt will hold the wheel mount shaft upright if the locking mechanism should fail. Property damage, personal injury or other consequential, non-warranty damage can occur if the locking mechanism fails and the safety bolt is not attached.

Safety cable attachment

11. When towing, the safety cable tabs (Figure 1) on either side of the spare tire carrier can be used to attach the safety cables.

Maintenance

12. At the beginning of each towing season, check to ensure that all fasteners are tight.

WARNING
Using the spare tire carrier will decrease the weight capacity of the vehicle’s hitch receiver by one third. This lowered capacity must still be more than the weight of a towed vehicle or hitch accessory attached to the spare tire carrier.

If it is not, replace the hitch receiver with one that has the appropriate weight capacity. Otherwise, structural failure will occur.

WARNING
The spare tire carrier has a maximum carrying capacity of 10,000 pounds and a maximum tongue weight of 400 pounds (excluding the weight of the wheel and carrier). Do not exceed these weight capacities or structural failure will occur.

If a longer power cord is necessary...

Hitch accessories such as the spare tire carrier will extend the length of the towing system. If your power cord is now too short, longer versions are available.
