

BASEPLATE KIT INSTALLATION INSTRUCTIONS

ROADMASTER, Inc. 6110 NE 127th Ave. Vancouver, WA 98682 1-800-669-9690 fax 360-735-9300 www.roadmasterinc.com

PARTS LIST:

- 1- MAIN BRACE (A) - Passenger side
- 1- FRONT BRACE (B) - Passenger side
- 1- FRONT BRACE (C) - Driver's side

KIT NO. 1144-5

7-6-00

IMPORTANT: All baseplates **must** be assembled with all the bolts left loose for final adjustment and positioning (before tightening) unless otherwise instructed. All bolts **must** be torqued for proper strength. If more than one bolt is used per fastening point, the diagram may only show one.

- Use flat washers over all slotted holes
- Use lock washers on all fasteners

WARNING

Failure to follow the below warnings and the installation instructions may result in voiding your warranty, property damage, the loss of your towed vehicle, personal injury or even death.

- Installation of most baseplates requires moderate mechanical aptitude and skills. We strongly recommend professional installation by an experienced installer.
- The installer must read the instructions and use all bolts and parts supplied.
- Use Loctite® Red on all bolts used for mounting this baseplate.
- Every 3,000 miles, the owner must inspect the fasteners for proper torque, according to the bolt torque requirements chart on the last page of these instructions. The owner must also inspect all mounting points for cracks or other signs of fatigue every 3,000 miles.
- The owner must check the vehicle manufacturer's instructions for the proper procedure(s) to prepare the vehicle for towing. Some vehicles must be equipped with a transmission lube pump, an axle disconnect, driveline disconnect or free-wheeling hubs before they can be towed. Failure to properly equip the vehicle will cause severe damage to the transmission.
- Do not weld. This baseplate is designed to be bolted to the vehicle. Welding will void the warranty.
- Do not use this document for custom fabrication, as it may not show all parts or structural components could result in loss of the towed vehicle.
- If the towed vehicle has been in an accident, it must be properly repaired before attaching the baseplate. Do not install the baseplate if any structural frame damage is found.
- If running changes were made by the vehicle manufacturer after this

kit was designed, some bolts or other fasteners in the hardware pack may no longer be the correct size. It is the installer's responsibility to verify this kit is securely fastened to the vehicle and fitted with the correct hardware to account for these changes.

- Roadmaster manufactures many styles of baseplates. If your baseplate has removable arms, they must be removed before driving the vehicle, unless the arms can be pinned or padlocked in place. If not secured, the arms could vibrate out.
- Some motorhome chassis have such a tight turning radius that you can damage your motorhome, towed vehicle, tow bar or baseplate while turning sharply. Before getting on the road, test your turning radius in an empty parking lot. Turning too sharply could result in non-warranty damage to towing system, motorhome and/or towed vehicle.
- Do not back up with the towed vehicle attached or non-warranty damage will occur to your towing system, motorhome and/or towed vehicle.
- The safety cables must connect the towing vehicle to the towed vehicle frame to frame, with the cables crossed, with enough slack for sharp turns. Refer to the cable instructions for proper routing. Failure to leave enough slack in the safety cables, or failure to connect the safety cables frame to frame, will result in the loss of the towed vehicle.
- This kit is designed for use with ROADMASTER tow bars and ROADMASTER adapters only. Using this kit with other brands, without an approved ROADMASTER adapter, may result in non-warranty damage or injury.
- Upon final installation, the installer must inspect the baseplate to ensure adequate clearance, particularly around hoses, air conditioner lines, radiators, etc.
- This baseplate is only warranted for the original installation. Installing a used baseplate on another vehicle is not recommended and will void the warranty.

BASEPLATE KIT INSTALLATION INSTRUCTIONS

ROADMASTER, Inc. 6110 NE 127th Ave. Vancouver, WA 98682 1-800-669-9690 fax 360-735-9300 www.roadmasterinc.com

KIT NO. 1144-5

- Important:** please use all supplied bolts and parts and read all instructions carefully before beginning this installation. The majority of questions you may have can be answered within the text, and proper installation will ensure safe and secure travel. Now, begin the installation. This XL Series bracket is designed to fit between the front tie downs in front of the radiator. It utilizes the tie down plates and front suspension bolts as anchor points. Remove the lower radiator air scoop (four 10mm screws). This will be lift off and replaced by the receiver brace cross angle.
- Remove the large 19mm (head) subframe bolts on each side. Pull forward on the plastic and hold the receiver brace in position inside the tie down plates and under the sub frame isolation mounts.
- Hold the receiver brace in position and bolt through each side of the tie downs with 5/8" x 1 3/4" bolts, 1/4" backing plates, lock washers and nuts. *Note:* the frame holes may have to be slightly enlarged. Be sure to position the backing plates correctly on the outside of the tie down plates. If fog lights are present, remove to provide access then reinstall when installation is complete.
- Bolt through the rear of the brace on each side with the large 19mm head subframe mounting bolts removed previously.
- Look up behind the bumper on both sides and you will see two small studs protruding from the front of the frame just behind the bumper. *Note:* some vehicles may be equipped with small harmonic dampeners on each side. Remove, if present. Take the upper brace plates and install on each side on these existing studs with the slight notch on one side facing to the side of the car. Bolt in place using the supplied 8mm x 1.25 nuts, lock washers and flat washers. Connect to the receiver brace on each side with one 1/2" x 1 1/4" bolt, flat washer, lock washer, and nut.
- Tighten all bolts to the torque specifications below.
- Trim the lower splash panels to fit and refasten.
- Insert the front braces into the receivers and secure with 5/8" draw pins and 1/8" spring pins.
- Mount the bar according to the manufacturer's instructions.
- Attach the 10" safety cables to the receivers with cable connectors and then to the tow bar and the tow vehicle's safety cables.

HARDWARE LIST:

4- 8mm x 1.25 nuts	2- 1/2" nuts	2- 1/4" backing plates
2- 1/8" spring pins	2- 1/2" lock washers	2- cable connectors
4- 8mm flat washers	2- 5/8" nuts	2- 10" safety cables
4- 8mm lock washers	2- 5/8" lock washers	
2- 1/2" x 1 1/4" bolts	2- 1/4" 1 hole backing plate	
2- 5/8" x 1 3/4" bolts	2- 1/4" 3 hole backing plate	
2- 1/2" flat washers	2- 5/8" draw pins
