

MOUNTING BRACKET KIT INSTALLATION INSTRUCTIONS

ROADMASTER, Inc. 6110 NE 127th Ave. Vancouver, WA 98682 1-800-669-9690 fax 360-735-9300 www.roadmasterinc.com

PARTS LIST:

- 1- MAIN BRACE (A) - Passenger side
- 1- MAIN BRACE (B) - Driver's side
- 1- CROSS BRACE (C)
- 1- REAR BRACE (D)

KIT NO. 232-1

052898

IMPORTANT: All brackets *must* be assembled with all the bolts left loose for final adjustment and positioning (before tightening) unless otherwise instructed. All bolts *must* be torqued for proper strength. If more than one bolt is used per fastening point, the diagram may only show one.

- Use flat washers over all slotted holes
- Use lock washers on all fasteners

ROADMASTER Limited Warranty, including One-Year Conditional Warranty Text and Product Registration Card, in Carton.

WARNING

Failure to follow these instructions can result in property damage, personal injury or even death.

- Installation of most mounting brackets requires moderate mechanical aptitude and skills. We strongly recommend professional installation by an experienced installer.
- The installer must read the instructions and use all bolts and parts supplied. Failure to do so could result in loss of the towed vehicle.
- Use Loctite® Red on all bolts used for mounting this bracket.
- Do not use this document for custom fabrication, as it may not show all parts or structural components. Custom fabrication or an attempt to copy this bracket design could result in loss of the towed vehicle.
- Every 3,000 miles, the owner must inspect the fasteners for proper torque, according to the bolt torque requirements chart on the last page of these instructions. The owner must also inspect all mounts and brackets for cracks or other signs of fatigue every 3,000 miles. Failure to do so could result in loss of the towed vehicle.
- The owner must check the vehicle manufacturer's instructions for the proper procedure(s) to prepare the vehicle for towing. Some vehicles must be equipped with a transmission lube pump, an axle disconnect, driveline disconnect or free-wheeling hubs before they can be towed. Failure to properly equip the vehicle will cause severe damage to the transmission.
- If running changes were made by the vehicle manufacturer after this bracket was designed, some bolts or other fasteners in the hardware pack may no longer be the correct size. It is the installer's responsibility to verify that the bracket is securely fastened to the vehicle and fitted with the correct hardware to account for these changes. Failure to securely

fasten the bracket could result in loss of the towed vehicle.

- If the towed vehicle has been in an accident, it must be properly repaired before attaching the bracket. Do not install the bracket if any structural frame damage is found. Failure to repair the damage could result in the loss of the towed vehicle.
- Some motorhome chassis have such a tight turning radius that you can damage your motorhome, towed vehicle, tow bar or bracket while turning sharply. Before getting on the road, test your turning radius in an empty parking lot. Turning too sharply could result in non-warranty damage to towing system, motorhome and/or towed vehicle.
- Do not back up with the towed vehicle attached or non-warranty damage will occur to your towing system, motorhome and/or towed vehicle.
- The safety cables must connect the towing vehicle to the towed vehicle frame to frame, with the cables crossed, with enough slack for sharp turns. Refer to the cable instructions for proper routing. Failure to leave enough slack in the safety cables, or failure to connect the safety cables frame to frame, will result in the loss of the towed vehicle.
- This bracket is designed for use with ROADMASTER tow bars and ROADMASTER adaptors only. Using this bracket with other brands, without an approved ROADMASTER adaptor, may result in non-warranty damage or injury.
- Upon final installation, the installer must inspect the bracket to ensure adequate clearance, particularly around hoses, air conditioner lines, radiators, etc., or non-warranty damage to the towed vehicle will result.
- This bracket is only warranted for the original installation. Installing a used bracket on another vehicle is not recommended and will void the warranty.

MOUNTING BRACKET KIT INSTALLATION INSTRUCTIONS

ROADMASTER, Inc. 6110 NE 127th Ave. Vancouver, WA 98682 1-800-669-9690 fax 360-735-9300 www.roadmasterinc.com

KIT NO. 232-1

- Important:** please use all supplied bolts and parts and read all instructions carefully before beginning this installation. The majority of questions you may have can be answered within the text, and proper installation will ensure safe and secure travel. Now, begin the installation. This bracket assembly utilizes the main bumper mount bolts located behind the bumper and inside each wheel well and motor mount. Work on one side at a time. Remove the two large shoulder nuts inside the fender well.
- Hold the respective main brace (A or B) in position over the bumper mount bolts from which the shoulder nuts were removed.
- Now fasten the brace in place by replacing the shoulder nuts. Locate a large plastic flap covering a frame access hole on the outside of the frame. Pull the flap back and take a 1/4" x 1 1/4" x 2 1/2" backing plate and a 1/2" x 1 1/2" carriage bolt and insert it inside the frame. It should drop through the existing hole and the main brace.
- Proceed with the other side in the same manner.
- Bolt the face plate (D) to the main braces using the 1/2" x 1 1/2" carriage bolts provided.
- Insert the threaded backing plate (1/4" x 1 1/4" x 2") into the center mount over the lower unused hole and fasten the center brace © with a provided 5/8" x 2" bolt and 5/8" lock washer. Bolt through the front of the center brace and the face plate with two 1/2" x 1 1/2" carriage bolts supplied. The rear of the center brace should line up with a existing hole in the cross frame. Bolt through the rear of the brace and the cross frame with a 1/2" x 5" bolt, plate washer, flat washer, lock washer and nut. Be sure to use the large plate washer on top of the frame.
- Align the assembly and tighten ALL bolts according to the torque chart shown below.
- Then mount the tow bar and torque these bolts according to the torque chart.

HARDWARE LIST:

- 8-1/2" X 1 1/2" CARRIAGE BOLTS
- 9-1/2" NUTS
- 9-1/2" LOCK WASHERS
- 1-5/8" X 2" BOLT
- 1-5/8" LOCK WASHER
- 1-1/4" X 1 1/4" X 2" THREADED BACKING PLATE (with 5/8"nut)
- 2-1/4" X 1 1/4" X 2 1/2" SQUARE HOLE BACKING PLATE
- 7-1/2" WASHERS
- 1-1/2" PLATE WASHER
- 1-1/2" X 5" BOLT
