

# MOUNTING BRACKET KIT INSTALLATION INSTRUCTIONS

ROADMASTER, Inc. 6110 NE 127th Ave. Vancouver, WA 98682 1-800-669-9690 fax 360-735-9300 www.roadmasterinc.com

## PARTS LIST:

- 1- MAIN BRACE (A) - Passenger side
- 1- MAIN BRACE (B) - Driver's side
- 1- FRONT BRACE (C) - Passenger side
- 1- FRONT BRACE (D) - Driver's side

KIT NO. 607-17

7-20-99

**IMPORTANT:** All brackets **must** be assembled with all the bolts left loose for final adjustment and positioning (before tightening) unless otherwise instructed. All bolts **must** be torqued for proper strength. If more than one bolt is used per fastening point, the diagram may only show one.

- Use flat washers over all slotted holes
- Use lock washers on all fasteners

ROADMASTER Limited Warranty, including One-Year Conditional Warranty Text and Product Registration Card, in Carton.

## WARNING

Failure to follow these instructions can result in property damage, personal injury or even death.

- Installation of most mounting brackets requires moderate mechanical aptitude and skills. We strongly recommend professional installation by an experienced installer.
- The installer must read the instructions and use all bolts and parts supplied. Failure to do so could result in loss of the towed vehicle.
- Use Loctite® Red on all bolts used for mounting this bracket.
- Do not use this document for custom fabrication, as it may not show all parts or structural components. Custom fabrication or an attempt to copy this bracket design could result in loss of the towed vehicle.
- Every 3,000 miles, the owner must inspect the fasteners for proper torque, according to the bolt torque requirements chart on the last page of these instructions. The owner must also inspect all mounts and brackets for cracks or other signs of fatigue every 3,000 miles. Failure to do so could result in loss of the towed vehicle.
- The owner must check the vehicle manufacturer's instructions for the proper procedure(s) to prepare the vehicle for towing. Some vehicles must be equipped with a transmission lube pump, an axle disconnect, driveline disconnect or free-wheeling hubs before they can be towed. Failure to properly equip the vehicle will cause severe damage to the transmission.
- If running changes were made by the vehicle manufacturer after this bracket was designed, some bolts or other fasteners in the hardware pack may no longer be the correct size. It is the installer's responsibility to verify that the bracket is securely fastened to the vehicle and fitted with the correct hardware to account for these changes. Failure to securely

fasten the bracket could result in loss of the towed vehicle.

- If the towed vehicle has been in an accident, it must be properly repaired before attaching the bracket. Do not install the bracket if any structural frame damage is found. Failure to repair the damage could result in the loss of the towed vehicle.
- Some motorhome chassis have such a tight turning radius that you can damage your motorhome, towed vehicle, tow bar or bracket while turning sharply. Before getting on the road, test your turning radius in an empty parking lot. Turning too sharply could result in non-warranty damage to towing system, motorhome and/or towed vehicle.
- Do not back up with the towed vehicle attached or non-warranty damage will occur to your towing system, motorhome and/or towed vehicle.
- The safety cables must connect the towing vehicle to the towed vehicle frame to frame, with the cables crossed, with enough slack for sharp turns. Refer to the cable instructions for proper routing. Failure to leave enough slack in the safety cables, or failure to connect the safety cables frame to frame, will result in the loss of the towed vehicle.
- This bracket is designed for use with ROADMASTER tow bars and ROADMASTER adaptors only. Using this bracket with other brands, without an approved ROADMASTER adaptor, may result in non-warranty damage or injury.
- Upon final installation, the installer must inspect the bracket to ensure adequate clearance, particularly around hoses, air conditioner lines, radiators, etc., or non-warranty damage to the towed vehicle will result.
- This bracket is only warranted for the original installation. Installing a used bracket on another vehicle is not recommended and will void the warranty.

# MOUNTING BRACKET KIT INSTALLATION INSTRUCTIONS

ROADMASTER, Inc. 6110 NE 127th Ave. Vancouver, WA 98682 1-800-669-9690 fax 360-735-9300 www.roadmasterinc.com

**KIT NO. 607-17**

- Important:** please use all supplied bolts and parts and read all instructions carefully before beginning this installation. The majority of questions you may have can be answered within the text, and proper installation will ensure safe and secure travel. Now, begin the installation. This XL bracket kit is designed so the visible front braces can be removed when not in use. The kit consists of two main receiver braces, two front braces, two side mount braces and a hardware packet. The kit utilizes the main bumper attachment points and frame as mounting points. This is a box-like structure located behind the bumper on each side of the main frame. Some vehicles may have a tow hook located on the passenger side of the frame. This may have to be removed to provide access to the inside bolt which has to be installed. If the vehicle has a skid plate, remove it temporarily by removing three bolts, two on the side of the plate and one in the center. The front of the receiver braces use the front bumper support as a mounting point.
- Starting with the driver's side, fit the receiver brace inside the frame tie down loop and inside the box like support structure for the bumper. The existing hole in the back of the structure should match the slotted hole in the brace backing plate. Using a supplied 1/2" x 1 1/2" bolt, bolt through this hole using a 1/2" plate washer, lock washer and nut. Now, bolt through the tie down loop using the special 1/2" clipped plate washer and supplied 1/2" bolt and washers. *Note:* the Honda Passport has small 10mm bolts, which protrude into the mounting area. You may have to cut the excess length off for clearance.
- Bolt the side tab on the front of the receiver brace with a 1/2" x 1 1/2" bolt. It should line up with a existing hole in the bumper support.
- Use a 1/2" x 4" bolt, plate washers, lock washers and nut to bolt through the front mounting tabs and the bumper support. Torque all bolts to the specifications below.
- Repeat steps 2 through 4 for the remaining side.
- Insert the front braces into the receiver braces and secure using 5/8" draw pins and 1/8" spring pins.
- Mount the tow bar according to the manufacturer's instructions.
- Connect the included safety cables to the front of the receiver braces with the cable connectors and the other end to the tow vehicle's safety cables.

### Bolt kit

4- 1/2" x 1-3/4" bolts	2- 1/2" x 1-1/2"bolts
6- 1/2" nuts	2- 1/2" x 4" bolts
8- 1/2" lock washers	2- 5/8" draw pins
2- 1/2" plate washers	2- cable connectors
4- 1/2" flat washers	2- 1/8" spring pins
2- 1/2" clipped plate washers	2- 13" safety cables

## BOLT TORQUE REQUIREMENTS

Note: The torque values represented below are intended as general guidelines. Torque requirements for specific applications may vary. Roadmaster does not warrant this information to be accurate for all applications and disclaims all liability for any claims or damages which may result from its use.

STANDARD BOLTS			METRIC BOLTS			METRIC BOLTS		
Thread Size	Grade	Torque	Thread Size	Grade	Plated/Unplated	Thread Size	Grade	Plated/Unplated
