Instructions

1. Before installing the seat adaptor, the mounting post (which was included with your BrakeMaster system) must be removed from the round plate (Fig.1). First, secure the round plate in a vise. Use a wrench to loosen the mounting post, while holding the bolt with an Allen wrench. Don't try to turn the Allen bolt with the Allen wrench, as you might damage the wrench or bolt. Use a 1/2" open-end wrench to twist the mounting post off. Then, secure the mounting post to the center of the seat adaptor using the included 3/8" x 3/4" bolt and 3/8" lock washer.

2. Remove the front left side plastic seat track cover (Fig.2). Remove the two 15mm front seat track bolts (Fig.3).

3. Place a 1" x 3/8" spacer over the top of each seat track bolt hole. Using the supplied 8mm x 1.25 x 40mm bolts, fender washers and lock washers, bolt through the seat adaptor, pipe spacers, seat track and into the existing weld nuts in the floor (Fig.4).

Note: the mounting post on the adaptor (Fig.1) must be directly in line to the brake pedal. The BrakeMaster air cylinder may jam or function incorrectly if the mounting post is not directly in line with the brake pedal.

Tighten the bolts to 19 ft./lbs. or 228 in./lbs.
