**IMPORTANT:** All brackets **must** be assembled with all the bolts left loose for final adjustment and positioning (before tightening) unless otherwise instructed. All bolts **must** be torqued for proper strength. If more than one bolt is used per fastening point, the diagram may only show one.

- Use flat washers over all slotted holes
- Use lock washers on all fasteners

**WARNING**

Failure to follow these instructions can result in property damage, personal injury or even death.

- Installation of most mounting brackets requires moderate mechanical aptitude and skills. We strongly recommend professional installation by an experienced installer.
- The installer must read the instructions and use all bolts and parts supplied. Failure to do so could result in loss of the towed vehicle.
- Use Loctite® Red on all bolts used for mounting this bracket.
- Do not use this document for custom fabrication, as it may not show all parts or structural components. Custom fabrication or an attempt to copy this bracket design could result in loss of the towed vehicle.
- Every 3,000 miles, the owner must inspect the fasteners for proper torque, according to the bolt torque requirements chart on the last page of these instructions. The owner must also inspect all mounts and brackets for cracks or other signs of fatigue every 3,000 miles. Failure to do so could result in loss of the towed vehicle.
- The owner must check the vehicle manufacturer’s instructions for the proper procedure(s) to prepare the vehicle for towing. Some vehicles must be equipped with a transmission lube pump, an axle disconnect, driveline disconnect or free-wheeling hubs before they can be towed. Failure to properly equip the vehicle will cause severe damage to the transmission.
- If running changes were made by the vehicle manufacturer after this bracket was designed, some bolts or other fasteners in the hardware pack may no longer be the correct size. **It is the installer’s responsibility** to verify that the bracket is securely fastened to the vehicle and fitted with the correct hardware to account for these changes. Failure to securely fasten the bracket could result in loss of the towed vehicle.
- If the towed vehicle has been in an accident, it must be properly repaired before attaching the bracket. **Do not install the bracket if any structural frame damage is found.** Failure to repair the damage could result in the loss of the towed vehicle.
- Some motorhome chassis have such a tight turning radius that you can damage your motorhome, towed vehicle, tow bar or bracket while turning sharply. **Before getting on the road, test your turning radius in an empty parking lot.** Turning too sharply could result in non-warranty damage to the towing system, motorhome and/or towed vehicle.
- **Do not back up with the towed vehicle attached** or non-warranty damage will occur to your towing system, motorhome and/or towed vehicle.
- The safety cables must connect the towing vehicle to the towed vehicle frame to frame, with the cables crossed, with enough slack for sharp turns. **Refer to the cable instructions for proper routing.** Failure to leave enough slack in the safety cables, or failure to connect the safety cables frame to frame, will result in the loss of the towed vehicle.
- This bracket is designed for use with ROADMASTER tow bars and ROADMASTER adaptors only. **Using this bracket with other brands, without an approved ROADMASTER adaptor, may result in non-warranty damage or injury.**
- Upon final installation, **the installer must inspect the bracket to ensure adequate clearance, particularly around hoses, air conditioner lines, radiators, etc., or non-warranty damage to the towed vehicle will result.**
- **This bracket is only warranted for the original installation.** Installing a used bracket on another vehicle is not recommended and will void the warranty.
1. **Important:** please use all supplied bolts and parts and read all instructions carefully before beginning this installation. The majority of questions you may have can be answered within the text, and proper installation will ensure safe and secure travel. Now, begin the installation. This bracket kit is one of our XL series, which features removable front braces. It consists of two receiver braces which utilizes the existing tow bracket mounting points and two front braces. Remove the plastic splash panels surrounding the front tow brackets to provide access to these points.

2. Locate the small angle brackets bolted to the main tow brackets on each side and remove them. Note: later models may not have these brackets. In this case, proceed to step three.

3. Work on one side at a time and take two 10mm x 1.25 x 30mm bolts, flat washers, lock washers, and a socket with an extension and bolt upward through the top holes of each main brace into the existing threaded holes in the frame. Note: 1998 and later vehicles may not have these threaded holes. In this case, push the receiver brace up into position and install with the 7/16" bolts. Using a long drill bit, drill two ¼" holes through the bottom of the frame using the slotted top holes in the brace as a template. Use a 3/8" drive air wrench or rachet to install two included 3/8" x 1½" self tapping bolts. Now, take three of the 7/16" x 1½" bolts provided and bolt through the upper three holes in the side of the brace and the side of the tow bracket using flat washes, lock washers and nuts. Note: on some cars, the holes may have to be enlarged slightly.

4. Bolt through the lower hole in the brace and tow bracket using a ½" x 1½" bolt, clipped plate washer, lock washer and nut.

5. Tighten the two original top bolts first, then tighten the lower bolts. Use the torque values in the torque chart below.

6. Insert the front braces into the receivers and secure using the 5/8" receiver pins and 1/8" spring pins.

7. Mount and align the tow bar according to the manufacturer’s instructions.

8. Attach the safety cables to the receivers using the supplied cable connectors and to the tow vehicle’s safety cables.

**HARDWARE LIST:**
- 4-10MM X 1.25 X 30MM BOLTS
- 4- 3/8" x 1½" SELF TAPPING BOLTS
- 4-10MM FENDER WASHERS
- 2- 5/8" RECEIVER PINS
- 4-10MM LOCK WASHERS
- 2- 1/8" SPRING PINS
- 6-7/16 X 1½" BOLTS
- 2- CABLE CONNECTORS
- 6-7/16" LOCK WASHERS
- 2- 13" SAFETY CABLES
- 12-7/16" FLAT WASHERS
- 6-7/16" NUTS
- 2-3/4" X 1½" BOLTS
- 2-½" LOCK WASHERS
- 2-NUTS
- 2-½" CLIPPED PLATE WASHERS
- 2-½" CARDBOARD WASHERS
